Calvert USA Offers High Impact Energy Saving Product

Calvert USA and ESS Energy Products, Inc. team up to produce the industries preeminent attic ladder solution by adding ***The Energy Guardian® Kits*** to its product offering.

Calvert USA, located in Solomons, Maryland, is well known for making a wide variety of high quality attic ladders that are cost-effective and easy to install. Their folding ladders make it safe and easy to get into the attic.

ESS Energy Products, Inc. located in Paoli produces the award winning product line of ***The Energy Guardian® Kits***. These kits significantly reduce energy costs while making a home more comfortable.

Be it an attic ladder, push out panel or stairway, the attic entrance is commonly an overlooked source of significant energy loss in homes. Any attic entrance allows hot air to move in the wrong direction during both summer and winter months. That can cost homeowners \$100's every year in wasted heating and cooling costs, create drafts during cold weather and uncomfortably warm rooms in summer.

"As home heating and cooling costs rose, our customers increasingly wanted to know how to restore the 8-10 square foot hole in the thermal barrier starts Karel Konecny, president of Calvert USA. "After researching ways to solve the problem, it was clear that ***The Energy Guardian® Kits*** were the perfect solution for our clients. The combination of our ladders and the ESS Kits sets a new standard for the ladder industry."

"Calvert ladders and ***The Energy Guardian Kits*** are the convergence of technology to benefit homeowners- an outstanding attic ladder that will also reduce heating and cooling costs," adds Jim Melesky, president of ESS Energy Products, Inc. in Paoli, PA. "Calvert USA has looked beyond its core business to focus on the ultimate client need."

The Energy Guardian Kits provide a tight air seal and high insulating cover for any type of attic entrance. Each is lightweight, easy to use and durable. The kits also stop a common need for space heaters and eliminate a cause of attic mold. Awarded for Environmental Efficiency and featured in a number of TV, radio and print consumer reports, ***The Energy Guardian Kits*** come with a 20 year warranty.

Calvert USA, Inc. of Solomons, MD was founded by a construction professional specializing in custom home building and remodeling. It provides customers with a large selection of high quality attic stairs and stair products not available elsewhere.
