***New Jersey Natural Gas and ESS Energy Products, Inc.  
Team Up to Eliminate A Major Source of Energy Loss***

One of the most significant sources of energy loss in your home is one you may have never thought about - your attic entrance.

Whether it is a small push up hatch, side wall panel, permanent stairway or pull down ladder, your attic entrance can make a big hole in your energy budget. This energy loss not only costs you money, it can also make your home uncomfortable - creating drafts and uneven temperatures.

***The Energy Guardian***® Kits have been used for a number of years in NJNG's program aimed at making low-income customers' homes more energy efficient. Based on that success, New Jersey Natural Gas and ESS Energy Products, Inc. are working together to help all NJNG customers to eliminate energy loss through the attic entrance. ***The Energy Guardian***® Kits are uniquely qualified to solve this problem because of their high R-Value, revolutionary air seal, durability and ease of use.

For more details on how NJNG is making these kits available to their customers, click [here](#).
